

Coastline

United Kingdom

The United Kingdom, or UK, is a union of four countries. These are England, Northern Ireland, Scotland and Wales. The UK is surrounded by four seas and oceans. These are the Atlantic Ocean, English Channel, Irish Sea and North Sea.

Coastal features

There are many features of the UK coastline.

Physical features

Physical features are naturally formed. Humans haven't made them. Rain, wind and the sea can change physical features over time.

Human features

Human features are those that have been made by humans. There are many human features on the coastline such as shops, roads and piers.

Erosion

Erosion is a natural process where materials, such as rock, sand and soil, are moved from one place to another. As waves crash against the coastline, they break off, or erode, tiny pieces of rock. Over time the coastline is worn away.

Sea defences, such as sea walls and lines of large rocks, called rip-rap, are put at the bottom of cliffs to stop erosion.

Maps

Maps are used to help people find their way from one place to another or find out where different places are. Physical and human features are marked on a map with symbols.

People will often use a compass to tell them which direction they are travelling. The main points on a compass are north, south, east and west.

Dangers at the coast

The coastline can be a dangerous place. It is important to stay safe and know what to do in an emergency.

Look for warning signs, follow advice and do not take risks.

Never go near water alone. Make sure an adult is with you.

Do not use inflatable toys or airbeds in the sea when a wind sock is blowing.

Red and yellow flags mean it is safe to swim.

Black and white flags mean it is safe for surfing, not for swimming.

Red flags mean danger. It is not safe to swim.

Check the weather forecast for bad weather.

Use safety equipment, such as a life jacket.

Call 999 in an emergency. Ask for the coastguard and they will call for the lifeboat.

RNLI

The Royal National Lifeboat Institution, or RNLI, is a charity that saves lives at sea. There are 238 RNLI lifeboat stations around the UK coastline. Each station has boats and special equipment that the crew use to help people in trouble in the water. Over 8000 people are helped by RNLI volunteers every year.

Whitby

Whitby is a busy tourist town on the coast of North Yorkshire, England. It is surrounded by the beautiful countryside of the North Yorkshire Moors. The River Esk runs through Whitby, splitting the town into two parts. The old town is on the east bank of the river and is full of small shops and narrow, cobbled streets. The new town is on the west bank of the river. The new town has bigger, more modern shops and a large park and museum.

Captain Cook timeline

Captain James Cook was a famous explorer who lived almost 300 years ago. He travelled to places that no other European had ever visited. He drew detailed maps and was the first person to sail around the world in both directions. He was awarded the Copley Medal for finding out how to keep sailors healthy at sea.

- 1728** Captain Cook was born in north-east England.

- 1755** He joined the Royal Navy and became a skilled sailor.

- 1768** He set off on his first voyage and discovered New Zealand.

- 1771** He returned to England.

- 1772** His second voyage began. He sailed close to Antarctica.

- 1775** Captain Cook returned to England.

- 1776** His third voyage began. He went to Hawaii.

- 1779** He was killed by islanders in Hawaii after an argument about a missing boat.

Problems at sea

Boats and ships can sometimes have problems at sea. Rocks, waves and weather can cause boats and ships to become damaged or capsize. A badly damaged ship may be left in the sea to sink or stuck on land. These are called shipwrecks.

Glossary

- capsize** When a boat or ship turns over in the water.

- charity** A group that raises money for people or animals in need.

- coastline** The place where the land meets the sea or ocean.

- compass** An instrument used for showing the direction.

- emergency** A situation that is serious and dangerous and needs urgent help.

- explorer** A person who travels to places to learn about them.

- feature** Something that is part of an area of land.

- volunteer** A person who works without being paid.

Let's Explore the World

Atlases

An atlas is a book of maps and charts showing different parts of the world and some physical features, such as rivers and lakes.

Compass directions

A compass is a tool for finding and showing directions. A compass has four cardinal points. These are north, south, east and west. They are used to describe locations and give directions.

Maps and keys

A map is a drawing of an area of land or sea, usually drawn from above. Map symbols represent physical and human features. A key is a list that explains what the map symbols mean.

Key	
	abbey
	tourist feature
	bridge
	information
	museum
	parking

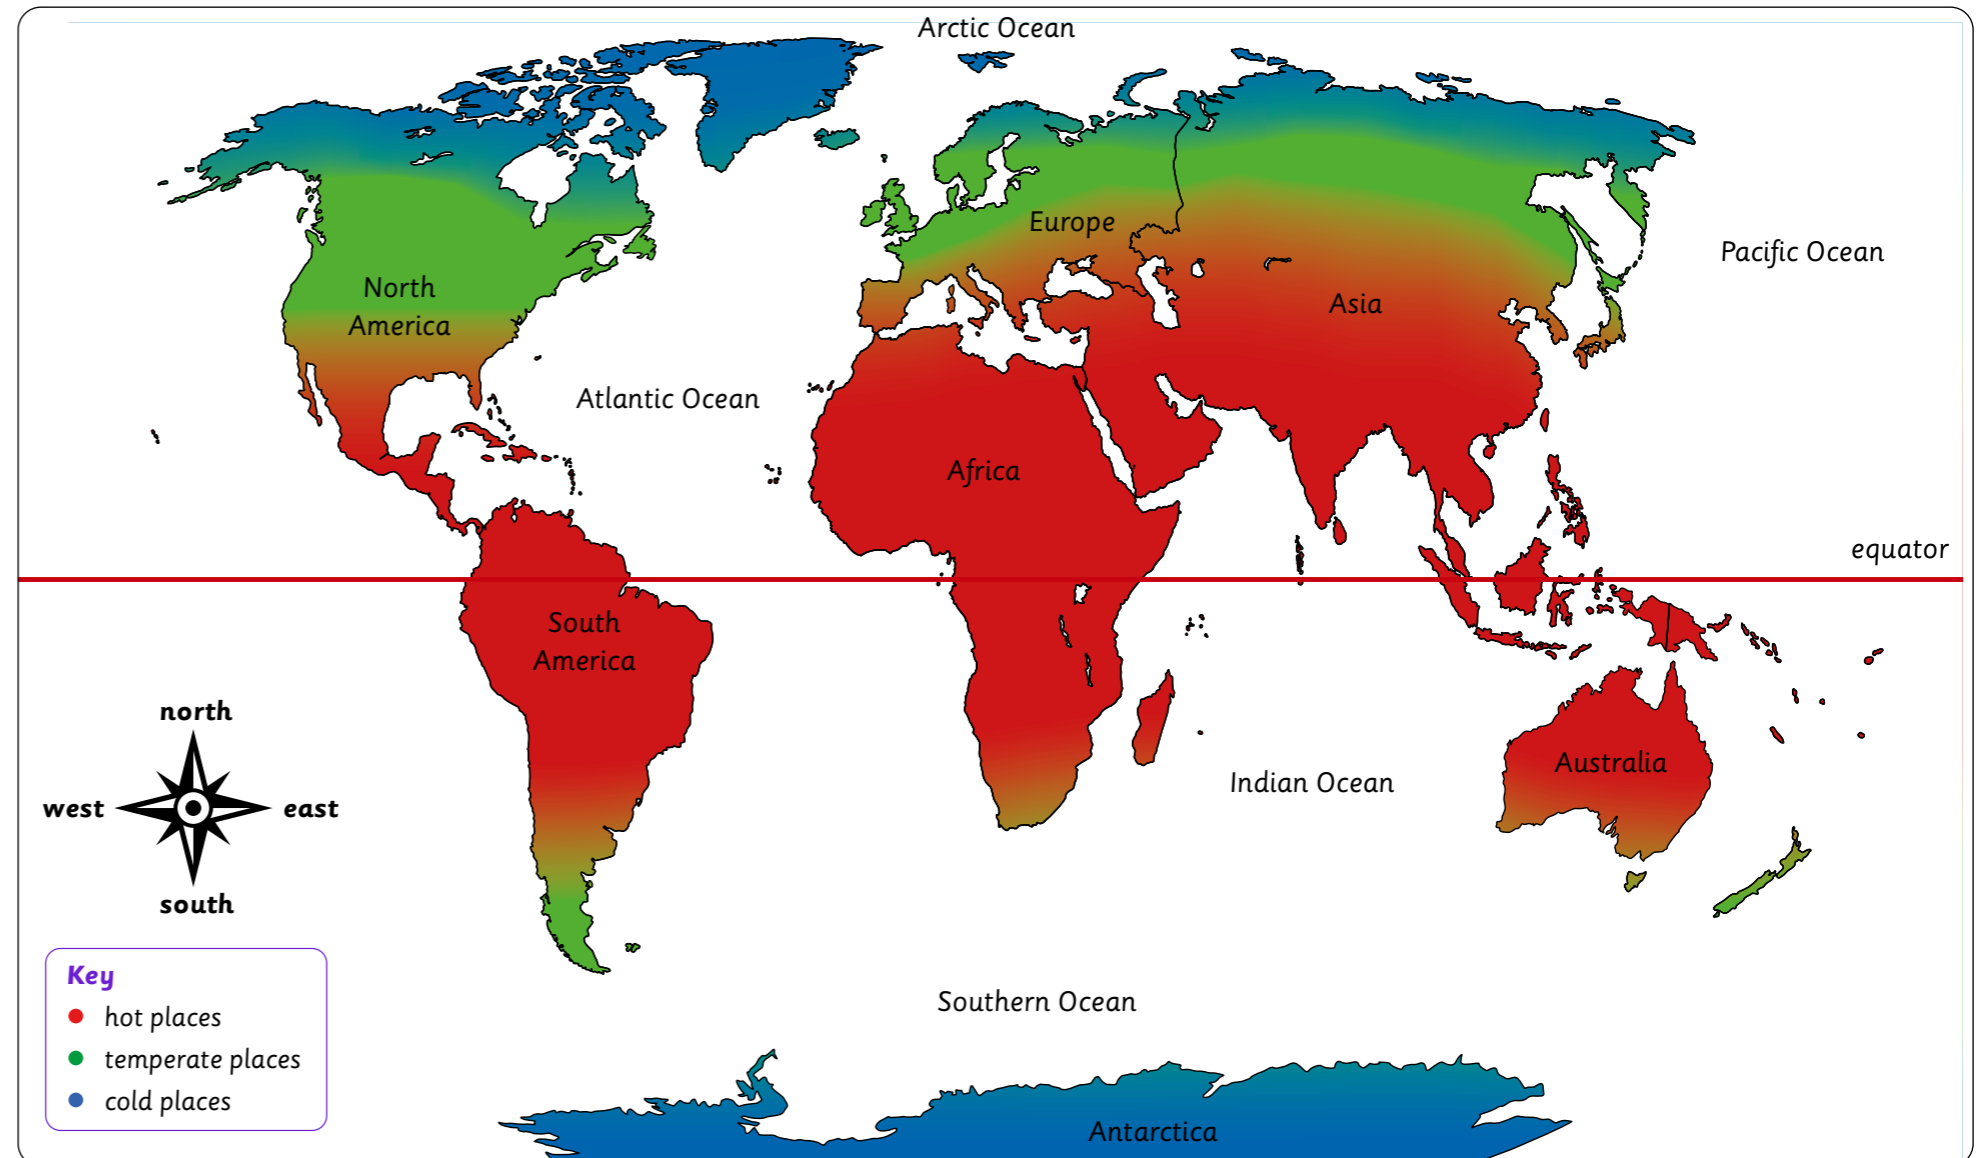

Equator and hemispheres

The equator is an imaginary line around Earth, dividing it into two halves. The half above the equator is called the Northern Hemisphere. The half below the equator is called the Southern Hemisphere. The North and South Poles are the furthest points from the equator.

Hot, temperate and cold places

Places nearer the equator are hotter, and places further away from the equator are colder. Temperate areas are between these hot and cold climates. A temperate climate is mild and not very hot or cold.

United Kingdom

The United Kingdom, or UK, is an island surrounded by seas and an ocean. The UK is made up of four countries, called England, Northern Ireland, Scotland and Wales. The United Kingdom has a temperate climate.

- **England** is the largest and warmest country in the UK. England's landscape has flat and hilly areas. The soil is good for growing crops. There are some mountains in the north.
- **Northern Ireland** is the smallest country in the UK. It is often windy, cloudy and rainy in Northern Ireland. There are some mountains in Northern Ireland, but most of the landscape is covered in rolling hills.
- **Scotland** is the second largest country. It has the coldest climate in the UK. The landscape of Scotland is famous for its mountains, forests and moorland.
- **Wales** is the third largest country. The climate is warmer than Scotland but cooler than England. It gets more rain and less sunshine than the rest of the UK. The landscape of Wales includes mountains, valleys, forests and marshes.

Comparing Somalia and England

Features of two countries can be compared to find out how they are similar or different.

Somalia

Somalia is a country on the east coast of Africa. It has a population of 16 million people. The equator crosses through Somalia, so the climate is hot and dry. The land is mostly flat grassland, and there are some mountains in the north.

England

England is a country in Europe. It has a population of 56 million people. England is between the equator and the North Pole. It has a temperate climate. England has flat and hilly areas, and there are mountains in the north.

Collecting data

Data is information or facts that are collected and then studied. Data can be numbers, words, measurements, observations or descriptions.

People do fieldwork to collect data about the weather, population or features of a place. After collection, they organise and study the data that they have recorded. Data can help people to answer questions, make decisions or take action.

Glossary

climate	The usual weather conditions of a place.
fieldwork	Visiting a place outside, to collect data and learn about the place.
human feature	A feature that has been made by humans, such as a shop, road and school.
moorland	A area of hilly land with low-growing plants, such as grass and heather.
observation	The action of watching something carefully.
physical feature	A feature that has formed naturally, such as a mountain, lake and river.
